

JIAHAO (CARL) SHI

TECHNICAL PROGRAM MANAGEMENT | AI PRODUCT | SOFTWARE ENGINEERING

Los Angeles, CA | carlshi617@gmail.com | +1 669-233-3505

EDUCATION

University of Southern California - M.S., Integrated Design, Business and Technology Expected 05/2028

New York University - B.S., Computer Science; Minor, Integrated Media Design 05/2026

Technical coursework/projects: C++ object-oriented programming; 2D game and graphics programming

EXPERIENCE

Build Hope | Product Strategy & Operations Consultant

Sep 2026

Client engagement through USC Iovine and Young Academy | Los Angeles, CA

- Worked in a 4-person, 5-day client sprint to reframe a social-media request around engagement and funding goals, limited staff capacity, and reusable event media; directly clarified priorities and constraints with the stakeholder.
- Researched ~8 social-media management platforms and hands-on tested Buffer, Metricool, and Monday.com; helped shift the recommendation to Metricool based on analytics, automation/AI features, learning curve, and cost.
- Designed and presented a five-phase, 30-day implementation roadmap and content playbook spanning setup, asset organization, planning, publishing, and optimization; proposed TikTok as a new-channel test. Stakeholders highlighted the roadmap as a clear reference and expressed interest in trying Metricool.

Xfanatical | Assistant Software Engineer Intern

Summer 2025

- Implemented Vue 3/JavaScript frontend and Python/MongoDB backend functionality for profile, leave-management, and analytics workflows, integrating REST APIs and transforming backend data for frontend display.
- Prioritized feature work using manager-defined urgency, complexity, review turnaround, and dependencies; re-estimated delivery timelines after review-driven scope changes and communicated schedule risks, blockers, and ETAs in daily engineering check-ins.
- Validated API integrations and edge cases with Postman and mock data, iterated through GitHub PR reviews, and merged reviewed work to main for subsequent connected development; reported progress in weekly company-wide reviews.

SELECTED PROJECTS

AI PC Build Advisor | Technical Product Lead, AI-Assisted Product Prototype

Summer 2026

- Conducted 3-5 user interviews and competitor research across PCPartPicker, Newegg, Micro Center, Best Buy, and online PC-building content before development, identifying novice pain points around technical complexity, fragmented research, and price context.
- Defined MVP scope and milestones and directed AI-assisted implementation of a React/TypeScript prototype with a domain-constrained AI assistant, component recommendations, up-to-3-way comparison, part replacement, compatibility warnings, and updated build pricing.
- Reviewed generated code and tested end-to-end user journeys, including incompatible configurations and replacement scenarios; prioritized core decision-support workflows while deferring complex retailer integrations beyond the MVP.

Dog Behavior Camera | Independent Computer Vision & IoT Project

Summer 2025

- Built and adapted a Raspberry Pi computer-vision prototype using Python, OpenCV, and YOLO to detect dogs and display real-time, posture-based behavioral-state feedback on device.
- Tuned detection weights, temporal buffering, and post-processing rules through real-dog testing to reduce transient misclassification; designed state-to-actuation logic that triggered a physical response when an elevated behavioral state persisted.

SKILLS

Programming: Python, C++, JavaScript

Engineering: Vue 3, REST APIs, MongoDB, Postman, Git/GitHub, Linux, Docker Compose, RabbitMQ

AI / Hardware: OpenCV, YOLO, Raspberry Pi

Product / Program: Requirements Analysis, Project Planning, Dependency Management, Feature Prioritization, Implementation Roadmaps, Stakeholder Communication, User Research, Competitive Analysis, Technical Documentation, Figma
